

CREO LAUNCHER

Starting the right Creo-environment has never been easier

Are you still tinkering with dozens of desktop icons, just to get the right start environment for Creo Parametric? Are you still copying config files together to have the needed settings for the task at hand?

Time to employ the power of Arsandis the Creo Launcher.

With the Creo Launcher, managing different Creo work environments is a breeze. Configuration and storage of different user environments is done directly from the user interface, without the need for any scripting. The Creo Launcher gives you full control over Creo Parametric version and datecode, departmental and personal configuration options, linked Windchill servers, license modules and much more.

How does it work?

Simply start Creo Launcher and enter the different options you want to use for your environment configuration. When ready, save it as a new Creo environment. That's it! When adding new configurations to your list, retrieve and amend existing ones or start afresh. And for those who prefer text authoring, edit your startup config directly, as it is stored in an open, human-readable XML format.

How does it help me?

- Save time by launching Creo with exactly the right settings with just one click.
- Reduce design errors and need for rework by using the proper configuration from the start.
- Capture, reuse and distribute crucial settings for certain product lines, customers or authorities.
- Establish departmental and company standards.
- Manage different personal configuration options.
- Change work environments with just one click.

What are the key features?

- Starts different releases and datecodes of Creo Parametric with preconfigured settings.
- Support for config.pro, config.sup and related configurations, such as display parameters, drawing settings, plot environment, start files search paths and much more.
- Hierarchical setup of company, departmental and personal startup configurations for an easy mix & match of settings
- Allows configuration of preferred license packages and floating modules.
- Manages different Windchill server environments and user accounts.
- Includes a variety of Creo and Windchill utilities (cache tools, ping tool, temp file manager etc.)
- Easy to install and distribute. No changes to Creo and Windchill installations required.

What do I need?

- Creo 1.0 F000 or higher
- Optional: Windchill 10.2 or higher
